

How to install and view using Camera Live

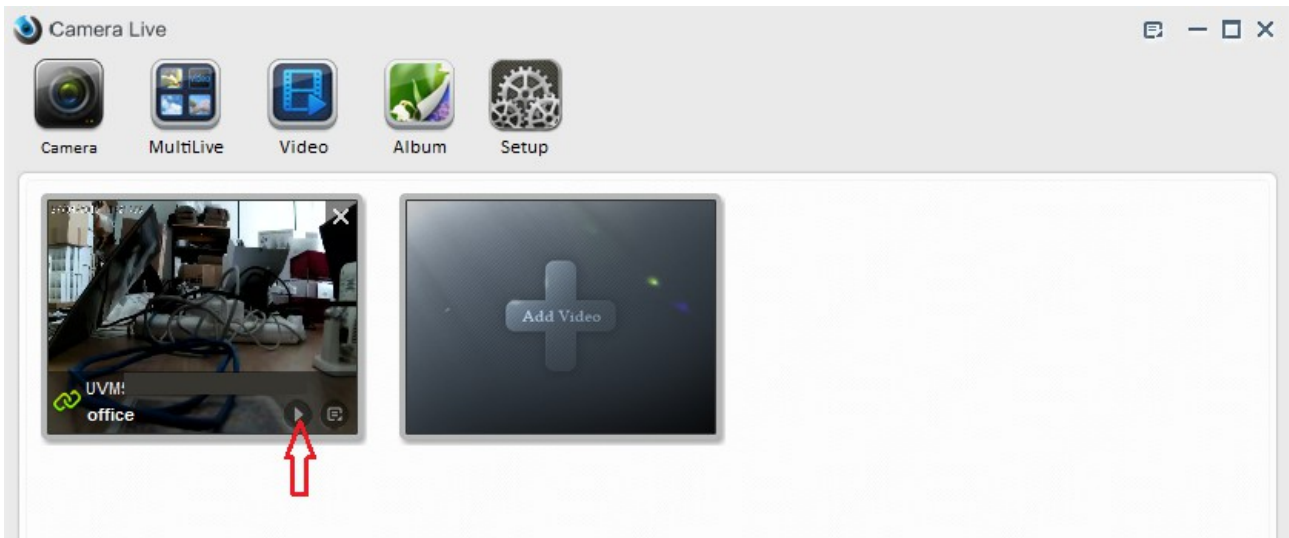

1) Download the correct [Camera Live](#) installer for your operating system from the UCam247 website and run this to install the program. Follow the install process till complete.

2) Once installed start the program and click **Add Video**. Click **Discover** to find your camera or type in the camera's **UID (must be all in upper case)**. Enter the camera's **Password (default is admin – all in lower case)** and give the camera a **Name** (this can be anything you want). Click **OK** when done.

- 3) When the link symbol appears **Green** click **Play** when you're ready to view. If the link symbol is **Red** check the UID and password as this means the camera is not connected to CameraLive correctly.

- 4) If your settings are all correct you should now be viewing the Live video from your camera.
